

Preamble

This version of the UFLS standard was drafted to ensure the UFLS programs are properly developed, coordinated, and documented, as well as to ensure the UFLS program design and implementation is periodically reviewed to ensure the UFLS program still meets the needs of its geographical area. The intent of this is to develop a regional standard with high level requirements that will provide flexibility that allows the entities to design and implement their programs without the need to modify the UFLS standard. The MRO staff developed these requirements following an outline of the entities' responsibilities.

PC

Develop Island methodology

Identify Islands

Develop an UFLS program

- collect data and create a database
- analyze Island needs
- develop coordinated programs internal and with adjacent PCs
- communicate this program

Periodically assess the program

TO/DP

Provide data to PC

Implement program

Coordinate within Islands

GO

Provide data on unit(s) and protection schemes

Coordinate within Island
